

UT Bathroom Services (UTBS)

David Chun, Zoe Ng, Joel Wang, Hans Xu

Project Overview

- An Android app that allows users to locate bathroom and water facilities on campus
- Locations are ranked by geographical proximity, cleanliness, user reviews, and other criteria
- User based reviews form a central database and are factored into recommendations

Benefits of UTBS

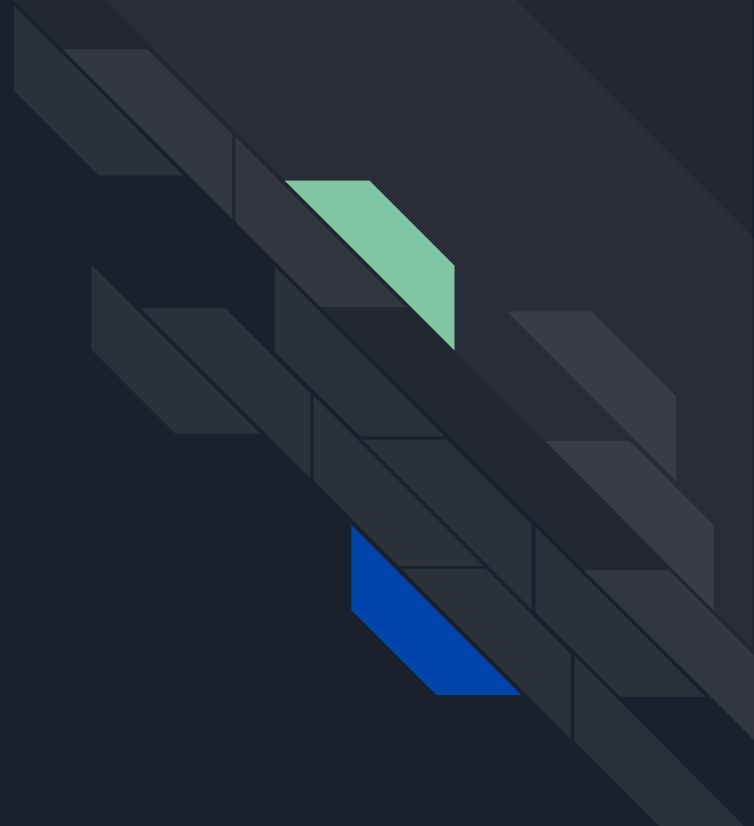

- Easily locate bathrooms and water fountains on the map
- Search for bathrooms and water fountains based on desired factors, such as WiFi quality or water temperature
- Save a list of favorite bathrooms and water fountains to quickly find them later

Notable Technologies Used

- Firebase Cloud Firestore
- DBFlow SQL Database
- Google Play Services Integration
